

# Georgia Cotton Growers' Efficiency Survey

The Georgia Cotton Commission has funded a research project designed to help Georgia cotton farmers improve their production efficiency. We are asking for your help in providing data for this project. Participation will involve filling out a questionnaire on various cotton inputs, farm qualities, and personal experience.

In exchange for your help in providing us with data, we will provide you with all our results. You will be able to log back into this website and see how your farm compares to other cotton farms in Georgia in terms of production efficiency. Only your farm will be identified, others will be anonymous (as will yours to all other farmers). We hope the results will allow us to give you specific feedback about usage levels of specific inputs you might want to adjust. These results will be in tables and graphs that make clear how you stack up to other cotton growers in Georgia and hopefully will allow all Georgia cotton farmers to learn where and how they can improve their efficiency and profitability.

**If you choose to participate please log onto the following website and complete the survey:**
